

Environmental Policies

With the group philosophy of “Creating a Vibrant Environment for All Members of Society,” Taisei Corporation, through its construction activities, strives for the development of quality social infrastructure and the improvement of the living environment in harmony with Nature.

As environmental problems worldwide increase, Taisei Corporation’s business activities are necessarily a part of the burden on the environment.

With these environmental management principles as a guide, and working for an environmentally sensitive society, Taisei Corporation and its group companies strive for “Environmental Protection and Innovation,” and promote “Pioneering Environmental Projects” in all corporate activities.

Action Guidelines

1. We shall prevent environmental pollution through compliance with environmental laws, regulations, and agreements and, through the effective application of our Environmental Management System (EMS), expand and continually improve environmental conservation activities.
2. We shall develop environmental technologies that contribute to the realization of a low-carbon society, the conservation of biological diversity, and the formation of a recycling-based society, and use these technologies to benefit our clients and resolve environmental problems.
3. During both planning and design phases, we shall give proper consideration to global and regional environments, and propose to our clients the creation of facilities that harmoniously coexist with the natural environment, conserve energy and resources throughout their life-cycle, and reduce CO₂ emissions.
4. During construction, we shall reduce CO₂ emissions, give proper consideration to biological diversity, and promote the efficient use of resources, thereby reducing the burden on the environment. In cooperation with specialty contractors and business partners, we shall promote the 3R of construction byproducts (Reduce, Reuse, Recycle), along with other environmental conservation activities.
5. We shall communicate effectively with local communities, and as a worthy corporate citizen, contribute to the conservation of regional environments.
6. We shall proactively cooperate with other nations, NGO’s and NPO’s in creating and protecting the environment.
