

International Operations

Since completing the Hotel Indonesia, the first overseas construction project by a Japanese company after WWII, Taisei has been involved in construction projects in a wide variety of fields in over 50 countries. The Taisei Corporation Group's global network has grown to the point where it now has local subsidiaries and affiliates in Asia, America, Europe and other parts of the world, as well.

The projects Taisei undertakes through its overseas local subsidiaries and affiliates are supported by a world-class research and development center, a design division ranked as one of Japan's best architectural offices, and the Company's Engineering Division, which applies the most advanced construction technology. Taisei has employed these resources in civil engineering projects, such as the Cirata Hydroelectric Power Station and Toyota Proving Ground in Arizona, and in construction projects such as the Kuala Lumpur International Airport, numerous semiconductor and other IT-related production facilities, and biotechnology-related production facilities, including pharmaceutical production plants.

Taisei has expertise in not only the construction of buildings and facilities, but also real estate, urban planning and various other business areas. The

Company offers a wide array of services covering everything from project planning, profitability analysis, site acquisition, acquisition of various permits, design, and engineering to facility operation and maintenance. It has won accolades not only for the construction work it has performed in Indonesia for an industrial park in West Java Province and for office, hotel and other development projects in America and the United Kingdom, but also for its ability to manage all aspects of these projects.

In the 21st century, BOT (Build Operation Transfer) and PFI (Private Finance Initiative) infrastructure construction schemes, which are already being used overseas, will likely gain importance in Japan, as well. Taisei, therefore, believes that transferring expertise back to Japan is an important mission of involvement in such overseas projects.

As a general contractor, Taisei is always searching for new opportunities. The Company's goal is to apply its overall capabilities, centered on construction, to meet not just the genuine needs of its clients, but also those of the countries and localities where projects are located, and to contribute globally through projects that lead to the creation of rich living environments.
