

Environmental Policy

Under the group philosophy of “Creating a Vibrant Environment for All Members of Society”, Taisei Corporation, through its construction activities, strives for the development of high-quality social infrastructure and improvement of the living environment in harmony with nature.

Moreover, realizing a sustainable society is a challenge common to all humankind, and a mission to be accomplished as a company.

With these environmental management principles as a guide, Taisei Corporation and its group companies proactively strive for an “environmentally conscious society”.

1. Development in Technology

Develop environmental technologies, propose to customers consideration for global environment and reduction of environmental impact through all construction lifecycle stages, and together with customers, create safe, comfortable and attractive spaces with exceptional value.

2. Collaboration with Supply Chain

Collaborate with our supply chain at each stage of the planning, procurement and construction activities to reduce environmental impact and to develop sustainable social infrastructure.

3. Cooperation with Stakeholders

Promote communication with local communities, governments, domestic or foreign NGOs/NPOs, and other organizations, to disclose information and to resolve environmental issues proactively.

In compliance with environmental-related laws and regulations, and appropriately recognizing “Risks and Opportunities”, we continually improve and put into practice our ISO14001-based Environmental Management System (EMS) for all the above-mentioned activities.
